

Vacuum clamps

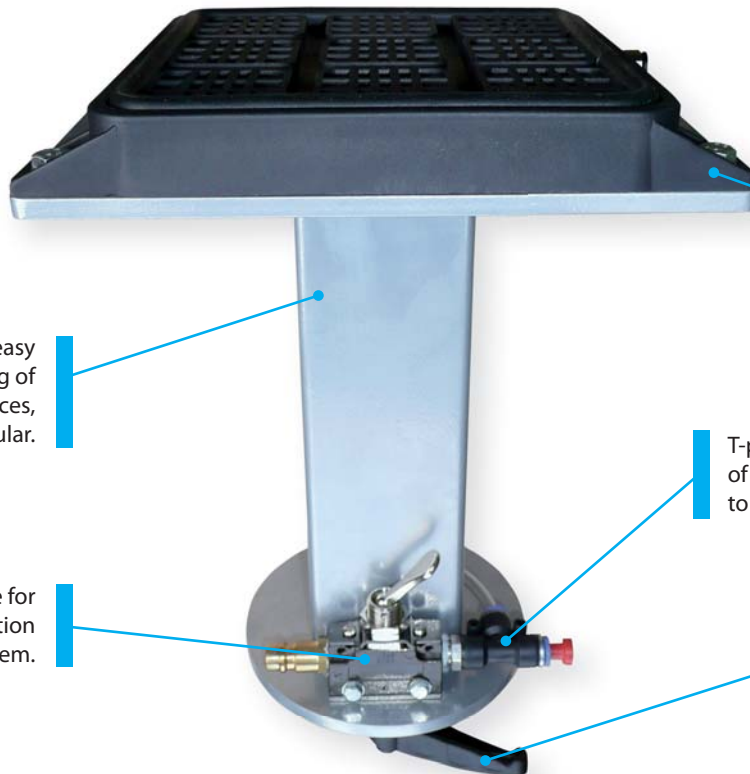

Vacuum clamps are designed to hold work pieces by vacuum from compressed air. For correct function of this system there is little compressor producing the pressure of 80 psi needed. By the vacuum clamps can be hold non porous work pieces as wood, laminate, MDF work pieces covered by veneer or foil, glass, plastic, metal etc.

» PCK-4

Power clamp kit

Stand for easy working of workpieces, especially circular.

Lever valve for easy operation with the system.

Power clamp VC-4 is producing vacuum from compressed air.

T-piece for connection of next power clamps to system.

Lever screw for easy mounting to work table.

Power clamps are produced in 3 types. **Single sided power clamp VC-4** is intended for tight fixing to work table. **Double sided power clamp VC-5** is designed for variable creation of working surface. **Power clamp kit PCK-4** makes possible the easiest getting to workpiece from every side.
